BRUNA CUNHA

Software Engineer

Software Engineer who loves building scalable, reliable systems and making automation seamless. With hands-on experience in Python, AWS, Terraform, Docker, and CI/CD, I enjoy optimizing workflows and keeping things running smoothly to make the developer's life better.

KEY SKILLS

Core: C#, Python, Java, AWS, Azure, Terraform, Docker, Kubernetes
CI/CD: GitHub Actions, Azure DevOps, Jenkins, ArgoCD, TeamCity, Bicep, Terraform
Other: SQL, Jira, Linux, Shell, Service Now

CAREER

INTEGRATIONS ENGINEER

British Red Cross | Jun 2025 - Present

- Developed API integrations using Azure Logic Apps, Azure Functions, and API Management, automating deployments and infrastructure provisioning via Bicep and Azure DevOps CI/CD pipelines.
- Designed infrastructure architecture and produced comprehensive technical documentation to standardize platform operations and improve knowledge sharing.
- Enhanced service reliability through proactive monitoring and operational runbooks, successfully decreasing support tickets by 50% in two quarters.

BUILD ENGINEER

Ubisoft Reflections | Oct 2023 - April 2025

- Developed internal developer tools to streamline CI/CD pipelines, enhancing deployment speed and reliability in a monorepo architecture.
- Improved developer experience by implementing scalable tooling, enabling faster feedback loops and higher deployment frequency.
- Worked cross-functionally with global teams, enhancing CI/CD processes across multiple Ubisoft studios.

SENIOR DEVOPS ENGINEER

Leroy Merlin | Apr 2023 - Oct 2023

- Worked in AWS infrastructure-as-code (Terraform/CDK) initiatives, improving consistency across deployments.
- Implemented GitHub Actions and Terraform-based infrastructure automation, improving deployment speed and stability.
- Worked with designing and implementing operations models, providing a solid foundation for effective management and monitoring of infrastructure and applications using Grafana and DataDog
- Automated deployments and implemented proactive monitoring to ensure compliance with operational SLAs and improve reliability.

DATA ENGINEER - MLOPS

iFood | Jan 2020 - March 2022

- Developed a Python-based CI/CD automation framework, reducing manual deployment effort by 85% and enabling faster releases.
- Provided application support for build and release pipelines, designed and implemented SLIs, SLOs and SLAs for the platform team.
- Worked alongside data scientists and developers to help understand the necessary features they need.
